This is before the morning brief but since so many are watching:

The fire remains only partially contained. Its traveling along both sides of a ski area. Its in canyons and is heading for the CITY of Los Alamos. The lab and city are evacuated.

Only a small fire broke out on the LANL base. In a tech area void of any radioactive history. The LANL is still in danger but resources are working to avoid that.

Regional air samplers should arrive today and put in place. ORIA resources are leaving today and are expected Wednesday. Of course, with no fire on LANL, there is not a great need to sample the smoke.
